

Inline Image Vertical Alignments & Font Styles

- 1. VAlign.T (Bold text): Text before  and text after image preserves bold style.
- 2. VAlign.M (Italic text): Text before  and text after image preserves italic style.
- 3. VAlign.B (Underlined text): Text before  and text after image preserves underline style.
- 4. Vector SVG (BIU text): SVG icon  rendered inline preserving BIU style.

Dynamic In-Memory Placeholders & Token Substitution

Build Status:

PASSED [100%]

 verified by automated test harness.

From BytesIO Stream:

PASSED [100%]

 with instant in-memory rendering.

Invoice item:

$e^{(i \cdot p)} + 1 = 0$

 Product Model X (\$499.00)

Inline Images Flow & Multi-line Wrapping

Inline Equation Sequence:  +  = [Result]

This paragraph tests multi-line word wrapping around inline images. We append continuous text to approach the right page margin so the inline image  is immediately followed by more text that automatically wraps to the next line. Notice that the subsequent text line is placed cleanly below the expanded line height without clipping or overlapping into the image.

Sizing, Aspect Ratio & Font Types

- 1. Times CoreFont & Auto-size (w=0, h=0): $e^{(i \cdot \pi)} + 1 = 0$ (matches current font size height).
- 2. Courier CoreFont & Width only (w=25, h=0): $e^{(i \cdot \pi)} + 1 = 0$ (height from aspect ratio).
- 3. DejaVu TTF (Unicode: $\sum \int \pi$) & Height (h=7.5): $e^{(i \cdot \pi)} + 1 = 0$ (proportional width in TTF).
- 4. Fit inside box (w=30, h=14, keep_aspect_ratio=True): $e^{(i \cdot \pi)} + 1 = 0$ (ratio preserved).
- 5. Explicit stretch (w=15, h=10, keep_aspect_ratio=False): $e^{(i \cdot \pi)} + 1 = 0$ (exact bounding dimensions).
